SUPPLIER RFP RESPONSE

Enterprise Cloud Customer Service & Case Management Platform

Apex Systems

Fictional proposal for AI evaluation practice

Procurement reference	BANK-CS-2026-01
Proposal date	12 October 2026
Three-year stated total	€480,000
Implementation target	24 weeks
Supplier profile	Strong technical design and security; higher price; moderate delivery schedule.

Important data note

All company names, prices, dates, references, certifications, service levels and claims are invented. This PDF is synthetic training data, not a real supplier offer.

1. Executive Summary and Understanding

Apex Systems understands that the fictional bank requires a secure, supportable customer service and case management platform integrated with existing banking applications. The bank values reliable operations, clear costs, implementation controls, privacy, and traceable service commitments.

Strong technical design and security; higher price; moderate delivery schedule.

2. Proposed Solution and Technical Approach

Proposes a modular SaaS platform with REST APIs, event-driven integration through a managed message broker, separate staging and production environments, and autoscaling services. Documents API versioning and retry patterns. Legacy core-banking integration is described at a high level; field-level mapping remains a discovery deliverable.

Integration due diligence

Confirm API coverage, authentication, rate limits, error handling, event delivery, monitoring, non-production access, data mapping, ownership of custom adapters and performance assumptions before award.

3. Implementation Plan

Twenty-four weeks: discovery (3), architecture (4), configuration (5), integrations (6), testing and migration rehearsal (4), go-live and hypercare (2). Roles include delivery lead, solution architect, integration engineers, QA lead and migration specialist. Schedule risk depends on bank test environments.

Governance controls to confirm

Validate weekly status reporting, RAID and decision logs, change control, test entry/exit criteria, operational readiness, rollback rehearsal, reconciliation and business acceptance. Confirm which activities are included in the fixed fee.

4. Commercial Proposal

Cost component	Three-year amount
Subscription / platform	Included in stated total
Implementation	Included in stated total
Migration	Included in stated total
Support	Included in stated total
Stated total	€480,000

Three-year total €480,000: subscription €270,000; implementation €145,000; migration €25,000; support €40,000. Assumes 500 agents and two non-production environments. Migration above 2 TB is charged separately.

Commercial assumptions and exclusions

Normalize agent count, environments, API/storage limits, migration volumes, renewal uplifts, taxes, third-party costs, optional modules, support coverage and change-request rates before comparing bids. The stated total is synthetic and needs scope normalization.

5. Security, Privacy and Compliance

TLS 1.2+, AES-256 at rest, SAML/OIDC SSO, RBAC, immutable audit export, annual penetration testing and incident response. Claims ISO 27001 certification. EU data region is configurable. SOC 2 evidence is available under NDA but not attached.

Evidence checklist

Request evidence for identity integration, least privilege, encryption/key management, audit retention, vulnerability remediation, penetration testing, breach notification, data residency, subprocessors, deletion at termination, backups and disaster recovery.

6. Support, Service Levels and Experience

24x7 P1 support, 30-minute acknowledgement, named service manager and quarterly reviews.

Two anonymized financial-services references are described; contacts may be arranged after shortlist.

7. Risks, Dependencies and Open Questions

• Higher three-year price

• Detailed core-banking field mapping deferred

• SOC 2 evidence not included

Clarification questions

1. Which requirements are included in the price, and which are optional or change requests?

2. Can you provide documentary evidence for security, service levels and references?

3. What are the precise RTO/RPO, residency, incident notification and deletion commitments?

4. Which assumptions could affect cost, integration effort, delivery date or support quality?

End of fictional supplier response. Intentionally varied evidence quality and omissions support testing extraction, validation, benchmarking and ranking.
