SUPPLIER RFP RESPONSE

Enterprise Cloud Customer Service & Case Management Platform

Orbit Digital

Fictional proposal for AI evaluation practice

Procurement reference	BANK-CS-2026-01
Proposal date	12 October 2026
Three-year stated total	€420,000
Implementation target	18 weeks
Supplier profile	Strong experience and references; vague integration plan; medium pricing.

Important data note

All company names, prices, dates, references, certifications, service levels and claims are invented. This PDF is synthetic training data, not a real supplier offer.

1. Executive Summary and Understanding

Orbit Digital understands that the fictional bank requires a secure, supportable customer service and case management platform integrated with existing banking applications. The bank values reliable operations, clear costs, implementation controls, privacy, and traceable service commitments.

Strong experience and references; vague integration plan; medium pricing.

2. Proposed Solution and Technical Approach

Offers mature enterprise platform with configurable workflows, analytics and broad connector catalogue. Product-tier diagrams are supplied, but not a bank-specific integration sequence, API examples, throughput assumptions or ownership for custom adapters.

Integration due diligence

Confirm API coverage, authentication, rate limits, error handling, event delivery, monitoring, non-production access, data mapping, ownership of custom adapters and performance assumptions before award.

3. Implementation Plan

Eighteen-week plan covering discovery, configuration, integration, UAT and rollout. Experienced project leadership is available, but data cleansing, interface contract tests and rollback acceptance criteria are not detailed.

Governance controls to confirm

Validate weekly status reporting, RAID and decision logs, change control, test entry/exit criteria, operational readiness, rollback rehearsal, reconciliation and business acceptance. Confirm which activities are included in the fixed fee.

4. Commercial Proposal

Cost component	Three-year amount
Subscription / platform	Included in stated total
Implementation	Included in stated total
Migration	Included in stated total
Support	Included in stated total
Stated total	€420,000

Three-year total €420,000: subscription €250,000; implementation €125,000; migration €15,000; support €30,000. Custom connector development and some analytics modules are priced after discovery.

Commercial assumptions and exclusions

Normalize agent count, environments, API/storage limits, migration volumes, renewal uplifts, taxes, third-party costs, optional modules, support coverage and change-request rates before comparing bids. The stated total is synthetic and needs scope normalization.

5. Security, Privacy and Compliance

Describes SSO, RBAC, encryption, audit trails and security operations. Claims ISO 27001 and EU hosting. DR is mentioned without numeric RTO/RPO. Data deletion and subcontractor controls are in separate schedules.

Evidence checklist

Request evidence for identity integration, least privilege, encryption/key management, audit retention, vulnerability remediation, penetration testing, breach notification, data residency, subprocessors, deletion at termination, backups and disaster recovery.

6. Support, Service Levels and Experience

24x7 incident intake, one-hour P1 response, monthly reports and named account director.

Three enterprise references, including two financial-services deployments; direct calls pending.

7. Risks, Dependencies and Open Questions

• Bank integration plan lacks detail

• Custom connector cost not fixed

• RTO/RPO and deletion commitments need confirmation

Clarification questions

1. Which requirements are included in the price, and which are optional or change requests?

2. Can you provide documentary evidence for security, service levels and references?

3. What are the precise RTO/RPO, residency, incident notification and deletion commitments?

4. Which assumptions could affect cost, integration effort, delivery date or support quality?

End of fictional supplier response. Intentionally varied evidence quality and omissions support testing extraction, validation, benchmarking and ranking.
